# Embeddable URLs

## Overview

When the development of full-scale API integration with Pilot is not a practical option for our customers, they can instead embed URLs to the Tracking or Scheduling modules on Pilot's website (https://delivers.maersk.com). These URLs, which are listed as follows, can be used, for instance, in communications or directly inside a system or an application outside of Pilot's ownership to allow easy navigation.

## Tracking Module URLs

**We highly recommend that the following new URLs are used. The legacy URLs will soon be discontinued**.

**Notes:**

- A shipment may or may not be scheduled for outbound deliveries via the Scheduling module based on the following:
  - Distance from Pilot's nationwide domestic stations: Currently, the application is limited to points within a 65-mile radius from a station.
  - Home-delivery service level requested: Some levels, e.g., Pilot's Premier Service, entail resources that cannot be scheduled online, such as specialized services, equipment, and personnel.
- Current location of the freight: Pilot does not allow scheduling of deliveries until the freight is in one of our stations or beyond the agent's physical possession.
